Powerful Features
JCLGPS
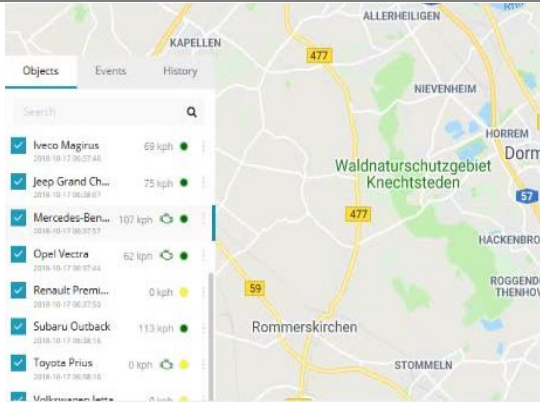

Real-Time Tracking
Track the location of your objects (vehicles, people, phones, bikes, etc.) online in real-time. Choose from the following maps: Google, Satellite, OSM etc. View additional information about the tracking objects, including its speed, exact address, petrol consumption, travel history, etc.

Notifications
Get instant alerts about your tracking object. Know when the object enters or exits a geo-zone, if it is speeding, and its stopovers. Get SOS alarms if it has been stolen, and easily turn the engine on or off. Get notifications to your iPhone, Android or Windows devices, via e-mail, mobile app or SMS.

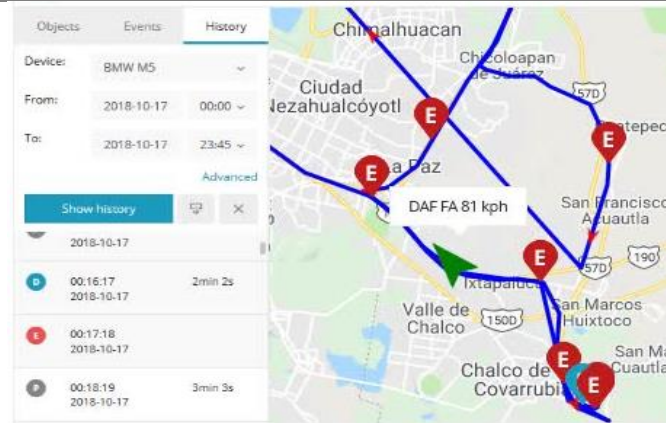

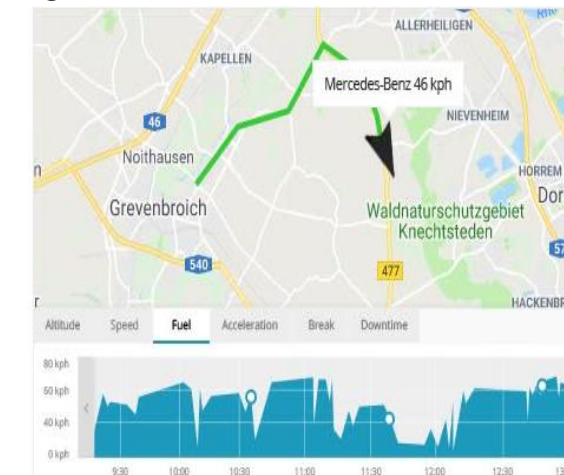

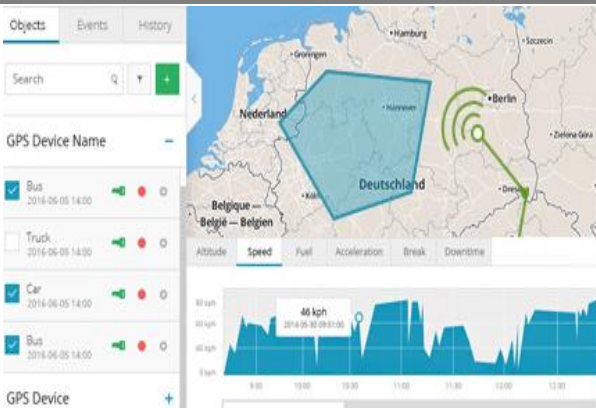

History and Reports
Download and review reports in different formats: XLS, PDF, CSV, TXT. Reports include various information by date and the GPS tracker name, including driving hours, stopovers, distance traveled, fuel consumption and much more. Detailed and group reports are also available.

Fuel Savings
Easily check the tank's fuel level and fuel consumption along the route in real time. Check for aggressive driving – rapid acceleration, speeding and braking – that can directly influence fuel consumption. It is a fact that improving driving behavior can cut your fuel costs significantly (by 5% to 15%). Moreover, fuel consumption control is a great preventive measure against fraud.

Powerful Features
JCLGPS

POI & Tools
With the Points of Interest (POI) tool you can add markers at locations, such as gas stations, hotels, restaurants, etc. You can also name the place, add a description, and use tools for calculating distances between places on the map.

Various Sensors
Add sensors and accessories for better monitoring.

- Integrate all kinds of sensors
- Free software updates
- Free mobile Apps

Geofencing
The Geofence feature allows you to set up geographic boundaries around areas that have specific interest for you. Receive automated alerts when the object enters or leaves marked boundaries.
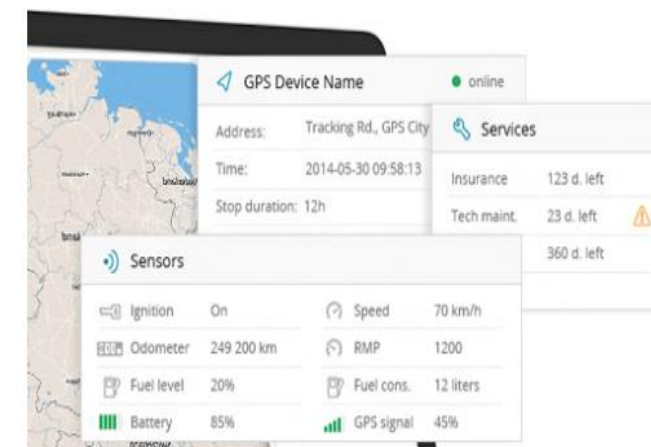

All Languages (English, French, etc.)
Easily choose your preferred language for the mobile app or cloud version. The Software is compatible with 900+ GPS trackers, translated into +30 languages.

24/7 support
Get live support whenever you need it.
